

SYMBIOSIS INSTITUTE OF TECHNOLOGY, PUNE
Department of Artificial Intelligence and Machine Learning

PROGRESS REPORT #1

Name : Vaibhav Uniyal(PRN : 22070126126)

Progress Report No #1

From: 15-12-2025 to 31-12-2025

Dated: 01/01/2026

Working at : Udacity course(self-paced)

Project : A/B Testing

1. Hours worked during the period of report:

During this reporting period, I worked on a structured **A/B Testing course** consisting of **multiple lessons, each divided into several chapters and practical examples**. I spent approximately **45 hours** covering all lessons and chapters.

2. Duties during the period of report:

During this period, my primary duty was to **understand and apply A/B testing methodologies used in industry-level decision-making**.

- I tried understanding the **core concept of A/B testing** and implemented example scenarios, which helped me understand how controlled experiments are designed in real-world products.
- I worked on **choosing and characterizing metrics** for experiments. Initially, I found it difficult to select appropriate evaluation metrics, but by comparing multiple metrics, I learned how metric choice directly impacts experiment conclusions.
- I tried designing an **end-to-end A/B experiment**, and by defining hypotheses, control groups, and treatment groups, I understood how experimental bias can be minimized.

- I analyzed **multiple-metric experiments** and initially struggled with conflicting metric outcomes. I learned how to prioritize metrics and interpret trade-offs, which improved my analytical reasoning.
- I worked on **analyzing experiment results**, where I learned how statistical significance affects decision-making and how incorrect interpretation can lead to flawed business conclusions.
- I reviewed common **A/B testing pitfalls and changes over time**, and by applying corrections, I understood how long-running experiments can drift and how to adjust analysis strategies accordingly.

3. New tasks planned during the period of report:

- I plan to apply A/B testing concepts to **real-world product and business scenarios**.
- I plan to strengthen my understanding of **data-driven decision-making** relevant to corporate environments.
- I plan to integrate experimentation concepts with **analytics and machine learning workflows**.

4. Network contacts established during the period of report:

I observed different approaches to **experiment design and result interpretation** shared by other learners.

5. Personal insights during the period of report:

- I learned that well-designed experiments are critical for reliable data-driven decisions.
- I understood that choosing the right metrics is as important as analyzing the results.
- This work helped me develop a structured, analytical mindset required in corporate and product-driven environments.
