PROGRESS REPORT #2

Name : Vaibhav Uniyal(PRN : 22070126126)

Progress Report No #2

From: 5-1-2026 to 15-1-2026

Dated: 14/01/2026

Working at : Api timing calls for the whole system pipeline
Project : CRM Automation

1. Hours worked during the period of report:

Total hours worked under the project **80 hours**.

2. Duties during the period of report:

During this period, my primary duty was to **understand the whole code base and the flow of the system and then make a new table in the production database to save those all api calls timings so that later we can understand the timing of the whole run.**

- I had to understand the working of async queues and couroutine tasks.
- Learned about salesforce and UAT and Prod for salesforce.

3. New tasks planned during the period of report:

- I plan to shift some synchronous tasks to coroutine tasks.
- I plan to migrate the db flush calls at the end at of the workflow to reduce the times taken for the db call, which may slow down the process.

4. Network contacts established during the period of report:

I observed different approaches to calculate the time stamps of each call for which I had to wrap each call in a reusable `time_helper` function to add the `api_name` and the time stamps in an async locked dictionary which is to be flushed to db at the end.

5. Personal insights during the period of report:

- I learned that well-designed async tasks can cut down the cost of parallelism which may cause heavy to an enterprise.
